

AUTOMATIVE GREENHOUSE

Automotive greenhouses use advanced glass for better visibility, comfort, and efficiency.

What is automated greenhouse?

An automated greenhouse is a modern agricultural facility designed to optimize the growth conditions for plants through the use of automated systems and technology. These systems control various environmental parameters to create an ideal growing environment with minimal human intervention.

How ?

by using soil moisture sensor to check whether the soil needs water or not , Photoresistor to check if plants need light , Artificial Intelligence to protect crops from animals and some other sensors
